

Chess Game Semester Project

Muhammad Taha	25F-0755
Hiba Eman	25F-0596
Section	BCS-2B
Submitted to	Mam Amna Waheed

- We made chess game using **Object Oriented Programming** Concepts in CPP.
- We did **class hierarchy**, implemented valid moves, input validation, internal console based GUI and external GUI using SFML.
- Class Hierarchy i.e. there is one parent abstract class **Piece**. Other actual pieces like King, etc **inherit from piece**.
- We kept **main function clean**.
- We did all our work using **Three File Structure**.
- We implemented the logic of **SAVE and LOAD GAME** at run time by doing **file handling**.

CHALLENGE

By Muhammad Taha (White)

Press any key to continue . . .

Each move gets saved and we can also play previously saved game whenever we want.

NO GAME SAVED YET

Press any key to continue . . .

♔ GAME INSTRUCTIONS ♔

1. White always plays first.
2. Enter moves in this format:
e2 e4
3. First position = source square
Second position = destination square
4. Invalid moves are rejected.
5. Features Included:
 - Check Detection
 - Checkmate Detection
 - Save / Load Game
 - Move Highlighting
6. Special Command:
 - exit -> Save and Exit
7. Input Rules:
 - Use spaces between moves
 - Example: a2 a4

♔ Protect Your King & Enjoy! ♔
